1. Claim 16 generic to a plurality of disclosed patentably distinct species comprising:

Group I, claims 1-15, drawn to a method of fabricating a bipolar semiconductor from a structure in which the structure includes a base layer, an emitter layer, and a collector layer, and forming a base contact post, an emitter contact post, and a collector contact post. The process performed on the cured passivation layer is to expose the base contact post, the emitter contact post, and the collector contact post.

Group II, claims 16-20, drawn to a method of fabricating a semiconductor device wherein the process performed on a cured passivation layer is to expose at least one conductive post, not necessarily limited to a base contact post, an emitter contact post, and a collector contact post.

2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
